

JIG INSTRUCTIONS FOR A 24 BOTTLE RACK

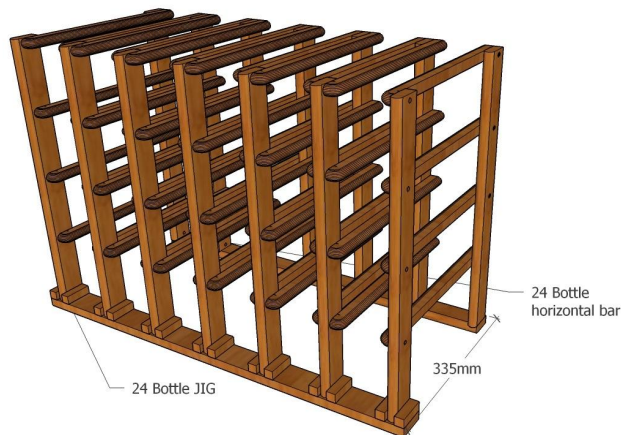

Our wine racks are easily assembled with basic hand tools.

Tools required - Hand screw driver only. (wood will split with too much force from power drills)

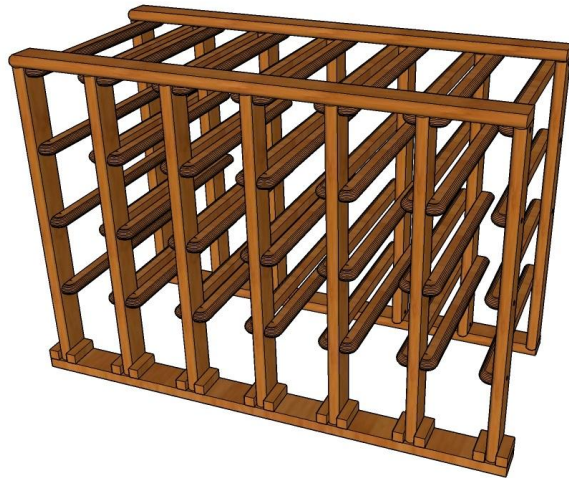

1) Lay the JIG and a 24 Bottle Horizontal bar on a flat surface, ensuring that they are evenly aligned approximately 335mm apart.

2) Place each of the wine rack Vertical units into the Jig, resting on the bar at the back to keep the units level. Ensure that the curved ends all face to the Jig.

3) Lay the Horizontal bars on top, curve to the front, and screw together.

4) Turn the unit upside down and remove the Jig. Screw in the remaining Horizontal bars.
